

the **Biomedical Ethics Program** presents

Science, Education, and Public Trust

a lecture by **Professor Kenneth R. Miller**

Recent events, notably the national controversy over **evolution** in the **classroom**, point to a growing skepticism of science among the public. Public scandals concerning drug **safety** and efficacy, such as the use of **antidepressants** in children and the Vioxx case, have only made the problem worse.

Why has there been an erosion of public **trust** in science? And what can and should scientists, policy makers, and science educators do about it?

DATE	Thursday, April 13
LOCATION	Barus & Holley 166
RECEPTION	6:30pm
LECTURE	7:00pm
